

Mobiloitte — Company Profile & History

Founding and Growth

Mobiloitte was founded in 2009 by Jagdish Harsh, who serves as Founder and Managing Director. The company began as a small engineering team based in Delhi, India, with a founding mission to build products that scale globally and ship faster than competitors. Over the following decade and a half, Mobiloitte grew from that small Delhi office into a team of more than 1,000 professionals operating across the APAC, EMEA, and North American regions.

Global Presence

Mobiloitte is headquartered in New Delhi, India, with its registered office at D-115, Okhla Industrial Area Phase-1, South Delhi. Beyond its Indian headquarters, the company maintains additional offices in Pune, India, as well as international offices in the United States, the United Kingdom, Singapore, South Africa, and the UAE. This global footprint allows Mobiloitte to collaborate with clients across time zones and deliver around-the-clock engineering support.

Client Relationships and Track Record

Since its founding, Mobiloitte has worked with more than 5,500 clients globally, ranging from ambitious startups to large enterprises, public sector agencies, and government programs. The company has designed and released more than 500 production-grade AI solutions, including computer vision systems, predictive analytics platforms, and generative AI products. These AI deployments have been reported to improve client operational efficiency by as much as 40 percent, while opening new data-driven revenue streams across 14 different industries.

Company Philosophy

Mobiloitte describes its guiding philosophy as the 'E-cubed' work mantra: Experience, Excellence, and Exuberance. This philosophy shapes the company's go-to-market strategy, with an emphasis on ensuring that clients receive not just technical solutions but a genuinely collaborative project experience. The company states that technology should amplify human potential rather than complicate it, and every engagement is expected to include architecture reviews, security audits, compliance alignment, and continuous feedback loops that measure real business impact.

Certifications and Recognition

Mobiloitte holds several industry certifications and accreditations, including NASSCOM accreditation, ISO certification, Linux Blockchain certification, and Drupal Partner status. The company is also affiliated with FICCI (Federation of Indian Chambers of Commerce and Industry) and NSIC (National Small Industries Corporation), and is registered as an MSME (Micro, Small and Medium Enterprise).

Delivery Model

Mobiloitte's typical project delivery model includes four phases: discovery and architecture design, secure integration with existing enterprise systems, controlled and phased deployment across communication channels, and ongoing monitoring with iterative improvement. For customer-facing and regulated use cases in particular, Mobiloitte's implementations commonly include retrieval-based grounding of AI responses, strict access controls, detailed audit logs, and human-in-the-loop escalation paths to reduce operational risk and improve reliability.
