

MOBILOITTE ENTERPRISE KNOWLEDGE BASE

Classification: Publicly Available Information

Version: 1.0.0

Target System: Retrieval-Augmented Generation (RAG) Platform

1. COMPANY

1.1 History

Mobiloitte is an enterprise AI, Blockchain, Cloud, IoT, and Digital Engineering company. Founded in 2009, the organization started in a small New Delhi office with a focus on cross-platform delivery and customer-first engineering. Over the past 15+ years, Mobiloitte has scaled globally to serve over 70 countries and complete over 5,000 projects, transitioning from a mobile and web application development agency into a premier digital transformation partner for ambitious brands, enterprises, and governments.

1.2 Timeline

- 2009: Mobiloitte founded in New Delhi, India.
- 2009 - 2012: Early expansion; US office established; team size grows to under 40 employees.
- 2013 - 2019: Expansion of services into Blockchain, IoT, and Enterprise Web Development.
- 2020 - Present: Launch of advanced AI divisions, including Agentic AI, RAG architectures, and the Converiqo platform. Reached a team size of over 1,000 employees with 6+ global hubs.

1.3 Mission

Mobiloitte was founded with a single mission—to build products that can scale globally and ship faster than anyone else. The mission emphasizes delivering scalable, secure, and robust software solutions that drive enterprise digital transformation while maintaining 100% client satisfaction.

1.4 Vision

To empower organizations to thrive in the ever-evolving digital landscape through innovative technologies, enabling digital transformation for a brighter future globally.

1.5 Core Values

- **Strong Business Ethics:** Upholding integrity in all client and internal interactions.
- **Top-Notch Quality Work:** Delivering engineering excellence and measurable business ROI.
- **Customer-First Engineering:** Prioritizing the client's needs, compliance, and user experience.
- **Security & Transparency:** Maintaining zero-trust architecture, regulatory compliance, and tamper-resistant audit trails.

1.6 Leadership

Information not publicly available regarding the full executive C-suite.

1.7 Global Presence

Mobiloitte serves clients in over 70 countries and operates out of 6+ global delivery and operational hubs across APAC, EMEA, and North America.

1.8 Offices

Region	Location Details	Primary Function / Focus
India (HQ)	D-115, Okhla Phase-1, New Delhi, India	Global Headquarters, AI Research, Development
India	Pune, Maharashtra	Development Center, Cloud Operations
India	Bengaluru	Web3,

	u, Karnataka	Blockchain, IoT Development
United Kingdom	Suite 415c, Margaret Powell House, Midsumm er Blvd, Milton Keynes MK9 3BN	European HQ, RegTech, FCA Complian ce, Sales
USA	Mobiloitt e Inc.,	Client Relations,

	Boston, MA	Strategy, Consultin g
Singapore	1 Raffles Place, #34-04, One Raffles Place, Singapore 048616	APAC Operation s
UAE	Al Dana Centre, Dubai	MENA Operation s
South Africa	8 Ashwood	African Market

1.9 Contact Details

- Global Helpline (UK/Singapore): 1800-5691801
- Website: <https://www.mobiloitte.com/>

1.10 Certifications

- ISO 9001: Quality Management Systems.
- ISO 27001: Information Security Management.
- SOC 2: System and Organization Controls (Audited for Data Compliance).
- HIPAA: Health Insurance Portability and Accountability Act Compliance.
- GDPR: General Data Protection Regulation Compliance.
- DPDP: Digital Personal Data Protection Act Compliance.

1.11 Awards

Information not publicly available regarding specific award titles and years.

2. SERVICES

2.1 AI Development

Overview

Mobiloitte provides full-service AI software development specializing in intelligent automation, AI mobile/web applications, predictive ML pipelines, and connected operational data.

Features

- Predictive Analytics Models.
- Generative AI Interfaces.
- LLM-ready business applications.
- AI-Augmented Web Applications (dashboards, workflows).

Benefits

- Accelerates digital ROI.
- Enhances lead generation and customer self-service.
- Automates complex business processes continuously 24/7.

Workflow

1. **Discovery & Audit:** Mapping requirements, mapping investments to ROI baselines (TBM methodology).
2. **Architecture:** Designing zero-trust security and AI governance.
3. **Agile Sprints:** 2-week sprint cycles with automated CI/CD and MLOps.
4. **Deployment:** Zero-downtime go-live with IntOps frameworks.

Industries

Healthcare, Finance, Retail, Logistics, Government.

Technologies

Python, OpenAI API, Next.js, React, Node.js.

Architecture

Cloud-native API orchestration integrated with ERP/CRM middleware.

FAQs

Q: How does Mobiloitte integrate AI into existing systems?

A: Mobiloitte utilizes API-first middleware and pre-built connectors to seamlessly wire AI interfaces into clean ERP/CRM data.

2.2 Machine Learning

Overview

Custom AI/ML model development focusing on data intelligence, training, deployment, and MLOps for enterprise applications.

Features

- On-Device Edge ML Inference.
- Natural Language Processing (NLP).
- Computer Vision integration.

Benefits

- Processes decisions locally with low latency.
- Minimizes cloud server costs via edge computing.
- Provides continuous model improvement via MLOps pipelines.

Workflow

- Data gathering and sanitization.
- Model Training and tuning.
- Deployment via MLOps.
- Continuous monitoring and recalibration.

Industries

Manufacturing, Supply Chain, Healthcare, Automotive.

Technologies

TensorFlow, PyTorch, Edge ML frameworks.

Architecture

Serverless cloud deployment combined with local edge ML inference engines.

FAQs

Q: Can Mobiloitte build ML models that operate without cloud dependency?

A: Yes, Mobiloitte specializes in creating on-device edge ML models that process decisions locally.

2.3 Generative AI

Overview

Development of solutions that generate content, code, or context-aware responses based on foundational LLMs tailored to enterprise data.

Features

- Custom Prompts & Guardrails.
- Text, image, and code generation automation.
- Multi-channel deployment (Web, WhatsApp, Voice).

Benefits

- Reduces manual content creation time.
- Provides highly accurate, context-aware customer support.

Workflow

- Foundational model selection.
- Guardrail implementation and prompt engineering.
- System integration and security hardening.

Industries

Marketing, Education, E-commerce, Media.

Technologies

Foundational LLMs, Python, LangChain.

Architecture

API-driven layer sitting between the LLM and the enterprise front-end with strict input/output sanitization.

FAQs

Q: How does Mobiloitte ensure Generative AI does not output harmful data?

A: By implementing strict Custom Prompts & Guardrails, alongside comprehensive access controls and logging.

2.4 Agentic AI

Overview

Enterprise agentic AI orchestration consulting practice that designs networks of autonomous agents to execute real business workflows.

Features

- Autonomous workflows operating 24/7.
- Every action is authenticated, logged, and auditable.
- Average Agentic MVP delivered in 18 days.

Benefits

- Replaces static AI tools with dynamic, autonomous systems.
- Cryptographically logs AI decisions to maintain compliance and regulatory defensibility.

Workflow

- Discovery session mapping the autonomous workflow.
- Integration of the Converiqo accelerator library.
- First autonomous workflow running in production within weeks.

Industries

Finance (FCA Risk Management), Logistics, Customer Support.

Technologies

Converiqo Platform, Custom Middleware, Immutable logging networks.

Architecture

Agentless zero-trust security paired with AI Governance Framework implementations.

FAQs

Q: What is the delivery timeframe for an Agentic AI solution?

A: Mobiloitte can deliver an average Agentic AI Minimum Viable Product (MVP) in 18 days.

2.5 RAG (Retrieval-Augmented Generation)

Overview

RAG Automation Engines designed to ground Large Language Models using trusted enterprise knowledge sources for accurate, non-hallucinated responses.

Features

- RAG-First Knowledge Grounding.

- Integration with Vector Databases.
- Semantic search over isolated enterprise data.

Benefits

- Eliminates AI hallucinations by restricting answers to provided corporate knowledge.
- Scales safely across employee onboarding, customer service, and operations.

Workflow

- Document ingestion and chunking.
- Vector embedding generation.
- User query retrieval and LLM synthesis.

Industries

Legal, Healthcare, Corporate HR, Customer Success.

Technologies

Vector Databases, Python, LLMs.

Architecture

Secure embedding layers connected to private data lakes with Role-Based Access Control (RBAC).

FAQs

Q: Why use RAG instead of just training an LLM?

A: RAG grounds the AI responses using your specific, trusted enterprise knowledge sources, ensuring factual accuracy without the massive cost of retraining foundational models.

2.6 Blockchain

Overview

Enterprise blockchain systems for tamper-resistant records, multi-party transparency, and programmable workflows.

Features

- Solidity & Rust Smart Contracts.
- Custom private, permissioned (Hyperledger/Corda), or public network setups.
- Multi-sig setups and MPC key management.
- Smart contract security audits (VAPT).

Benefits

- Establishes tamper-resistant audit trails.
- Automates dividend distribution and operational logic.
- Removes single points of failure in data storage.

Workflow

1. **Use-case Evaluation (Protocol selection).**
2. **Smart Contract Development (Automated business logic).**
3. **QA & Security Testing (Static analysis, fuzzing).**
4. **Controlled Rollout (Phased deployment).**

Industries

FinTech, DeFi, Supply Chain, Healthcare.

Technologies

Hyperledger, Corda, Solidity, Rust, Web3.js.

Architecture

Decentralized nodes, upgradeable contracts with strict versioning, and secure API middleware bridging to existing ERPs.

FAQs

Q: Does Mobiloitte build private or public blockchains?

A: Mobiloitte builds both custom private/permissioned chains (like Hyperledger) and scalable public blockchain networks depending on enterprise needs.

2.7 IoT (Internet of Things)

Overview

Design and development of custom IoT firmware, BLE communications, and real-time telemetry systems for connected device ecosystems.

Features

- **Industrial IoT & Telemetry.**
- **Custom BLE (Bluetooth Low Energy) Communications.**
- **Real-Time Sensor Syncing.**
- **Edge Computing Architectures.**

Benefits

- **Transforms hardware into smart, connected data points.**
- **Enables auto-predictive maintenance.**

Workflow

- **Hardware assessment.**
- **Firmware programming.**
- **Cloud platform integration.**
- **Field testing and synchronization.**

Industries

Manufacturing (Industry 4.0), Smart Logistics, Health Diagnostics, Energy.

Technologies

BLE, Edge Computing frameworks, Sensor Networks.

Architecture

Local sensor networks feeding into edge computing nodes before syncing with central cloud databases.

FAQs

Q: What type of IoT systems does Mobiloitte build?

A: Mobiloitte builds connected device ecosystems, sensor networks, industrial telemetry, and edge computing architectures.

2.8 Cloud Computing

Overview

Cloud-native application development and legacy enterprise system modernization for modular, scalable performance.

Features

- **AWS, Azure, and Google Cloud Platform migrations.**
- **CI/CD Pipeline Configurations.**
- **Infrastructure As Code (IaC).**
- **Serverless System Architecture.**

Benefits

- **Achieves 99.97% System Uptime SLAs.**
- **Eliminates brittle monolithic architectures.**
- **Connects FinOps-integrated delivery to optimize hosting costs.**

Workflow

- **Legacy system audit.**
- **Microservices decoupling.**
- **Kubernetes orchestration setup.**
- **Cloud deployment and monitoring.**

Industries

All Enterprise Sectors, E-Commerce, Digital Marketplaces.

Technologies

AWS, Azure, Kubernetes, Terraform, Docker.

Architecture

Composable architecture utilizing microservices to allow independent deployments with zero cascading failures.

FAQs

Q: What is Mobiloitte's average uptime for cloud-native apps?

A: Mobiloitte targets and achieves a 99.97% System Uptime SLA across its cloud-native architectures.

2.9 DevOps

Overview

Automation of software delivery pipelines, infrastructure management, and continuous integration/continuous deployment.

Features

- Automated CI/CD deployment pipelines.
- Container Orchestration (Kubernetes).
- MLOps integration for AI models.
- Automated QA pipelines.

Benefits

- Achieves 40% faster time-to-market.
- Averages 12 releases per month per active product (based on continuous delivery models).
- Ensures zero-downtime deployments.

Workflow

- Source code version control.
- Automated testing on commit.
- Containerization and vulnerability scanning.
- Automated deployment to staging/production.

Industries

Software as a Service (SaaS), Enterprise IT, FinTech.

Technologies

Git, Jenkins, GitLab CI, Kubernetes, Docker.

Architecture

Infrastructure as Code (IaC) bridging isolated development, staging, and production cloud environments.

FAQs

Q: How does DevOps improve deployment velocity?

A: By utilizing automated CI/CD and QA pipelines, Mobiloitte achieves an average 40% reduction in deployment cycle time.

2.10 Cyber Security

Overview

Comprehensive enterprise security implementation, automated compliance monitoring, and incident response readiness.

Features

- VAPT & Exploit Testing.
- Threat Modeling Safeguards.
- ISO 27001, SOC 2, HIPAA, & GDPR Compliance.
- Zero-Trust Security Models.

Benefits

- Eliminates breach risk via agentless zero-trust architectures.
- Zero regulatory fine exposure for clients on continuous compliance programs.

Workflow

- Security Blueprint definition.
- Threat modeling and architecture review.
- Pre-deployment static analysis and fuzzing.
- Continuous compliance automation.

Industries

Regulated Industries, Government, Finance, Healthcare.

Technologies

IAM frameworks, End-to-end encryption, VAPT tools.

Architecture

Identity verification at every API call, privacy-by-design baseline, and zero-trust data access layers.

FAQs

Q: Does Mobiloitte assist with UK FCA compliance?

A: Yes, Mobiloitte UK provides RegTech solutions including FCA Risk Management & Reporting and Financial Crime Intelligence.

2.11 Web Development

Overview

Enterprise web application development engineered for scale, security, integrations, and long-term maintainability.

Features

- Enterprise Web Portals (Customer/Partner portals).
- SaaS Application Development.

- Full-stack progressive web apps (PWAs).
- API and System Integration (SAP, Salesforce connectors).

Benefits

- Achieves 3x integration speed using pre-built middleware.
- Generates revenue while protecting user data.
- Responsive designs optimized for performance.

Workflow

- Discovery and UX/UI wireframing.
- Front-end and back-end parallel development (Agile Sprints).
- API integration.
- QA load testing and deployment.

Industries

Retail, B2B platforms, EdTech, Media.

Technologies

React, Next.js, Node.js, HTML5, WordPress, Drupal.

Architecture

Microservices-based platforms ensuring one source of truth without monolithic dependencies.

FAQs

Q: Does Mobiloitte provide CMS development?

A: Yes, Mobiloitte provides end-to-end CMS development including Drupal and WordPress upgrades, theming, and migration.

2.12 Mobile Development

Overview

Custom enterprise software development covering cross-platform and native mobile applications designed for high-stakes enterprise environments.

Features

- Swift & Kotlin Native Apps.
- Cross-Platform Flutter and React Native Solutions.
- Offline-First Sync Workflows.
- Mobile Device Management (MDM) compatibility.

Benefits

- Seamless user experiences across iOS and Android.
- Allows field operations to continue working offline.
- Meets rigorous security standards required by enterprises.

Workflow

- UI/UX Design for mobile form factors.
- Native or Cross-platform coding.
- Web backend and API integration.
- App Store/Play Store deployment and ASO.

Industries

Logistics (Field ops), Healthcare, Consumer Tech.

Technologies

iOS (Xcode, Swift, Objective C), Android (Kotlin), Flutter, React Native, PhoneGap.

Architecture

Mobile client communicating via secure, stateless REST/GraphQL APIs to a cloud-based server backend.

FAQs

Q: Can Mobiloitte build apps that work without an internet connection?

A: Yes, they engineer Offline-First Sync Workflows allowing the app to function and sync data once the connection is restored.

2.13 Game & Metaverse Development

Overview

Development of immersive digital experiences, AR/VR solutions, and metaverse ecosystems.

Features

- Metaverse Experiences.
- Augmented Reality (AR) & Virtual Reality (VR).
- WebGL-based Metaverse Development Services.
- NFT integration in gaming.

Benefits

- Engages users through next-generation immersive technology.
- Unlocks new revenue streams via Web3 gaming tokenomics.

Workflow

- Concept art and 3D modeling.
- Engine programming and physics implementation.
- Smart contract tokenomics integration (if Web3).
- Cross-device QA testing.

Industries

Entertainment, Education, Real Estate, Retail.

Technologies

Unity, Unreal Engine, WebGL, ARKit, ARCore.

Architecture

High-performance rendering clients connected to scalable multiplayer cloud servers and decentralized ledgers.

FAQs

Q: Does Mobiloitte build AR and VR applications?

A: Yes, Mobiloitte offers complete Metaverse & AR/VR services including immersive experiences and WebGL environments.

3. TECHNOLOGY STACK

Programming Languages

- Python
- Java
- JavaScript
- TypeScript
- Swift
- Objective-C
- Kotlin
- Go
- Rust
- Solidity

Frameworks (Frontend & Backend)

- React
- Next.js
- Node.js
- React Native
- Flutter
- WordPress
- Drupal
- HTML5

Databases

- PostgreSQL
- MySQL
- MongoDB
- SQL Server
- SQLite
- Amazon RDS
- Neo4j
- Vector Databases (for RAG)

Cloud & DevOps

- Amazon Web Services (AWS)
- Microsoft Azure
- Google Cloud Platform (GCP)
- Kubernetes (K8s)
- Docker (Containers)
- Terraform (IaC)
- Git
- CI/CD Pipelines (Jenkins, GitLab CI)

AI, ML & Data

- LangChain
- Foundational LLMs
- Edge ML Frameworks
- Predictive Analytics models
- Computer Vision engines
- NLP libraries

Blockchain & Web3

- Hyperledger
- Corda
- Web3.js
- Smart Contracts (Solidity/Rust)

4. PRODUCTS

4.1 Converiqo

Attribute	Details
Purpose	A Unified Agentic AI BOT Platform designed to deploy autonomous AI agents safely across enterprise workflows.
Architecture	Built with an API-first architecture, featuring RAG- First

	Knowledge Grounding.
Features	Retrieval augmented generation; Multi-Channel Deployment (Web, WhatsApp, Voice); Pre-built connectors for CRM/ERP/Help desk systems; Comprehensive access controls

	and detailed
Target Users	Enterprises, government teams, regulated industries, and large SMEs.
Technology	LLMs, Vector Databases, API Connectors, Agentic orchestration frameworks.
FAQ	Q: What channels does Converiqo support?

A: It deploys seamlessly across Web, WhatsApp, Voice, and other communication channels with unified management.

(Note: Other specific product names are not publicly available in the provided sources.)

5. PROJECTS

Information regarding exact client names is generally not publicly available, but Mobiloitte has delivered over 5,000 projects across various industries.

5.1 FinTech & Regulatory Compliance

- **Problem:** Manual FCA compliance monitoring is slow and prone to human error in financial institutions.
- **Solution:** RegTech platforms with automated compliance monitoring and financial crime intelligence.
- **Technologies:** Python, AI anomaly detection, Cloud-native databases.
- **Business Value:** Reduces regulatory fine exposure to zero.

5.2 Supply Chain Traceability

- **Problem:** Lack of transparency and trust in multi-party logistics and manufacturing.
- **Solution:** End-to-end traceability solutions ensuring provenance and authenticity.
- **Technologies:** Permissioned Blockchains (Hyperledger), IoT Sensors.
- **Business Value:** Creates cryptographically verifiable historical records and transparent ledger operations.

5.3 AI Customer Self-Service Portals

- **Problem:** High support ticket volumes leading to poor customer experience.
- **Solution:** RAG-based AI architectures and Agentic AI workflows to handle customer queries automatically.
- **Technologies:** Converiqo, Foundational LLMs, React.
- **Business Value:** Automates lead generation and customer service 24/7 without hallucinating facts.

6. HR & COMPANY POLICIES

Working Conditions & Employment

- **Working Hours:** Information not publicly available.
- **Leaves / Attendance:** Information not publicly available.
- **WFH / Hybrid:** Information not publicly available.
- **Payroll & Benefits:** Information not publicly available.
- **Exit Process:** Information not publicly available.
- **Recruitment & Internship:** Information not publicly available.

Training & Code of Conduct

- **Training Issues:** Unofficial public reviews indicate instances of an intensive "Hire and Fire" policy for trainees, alleging a 3-month unpaid training period where trainees are expected to learn rapidly via task execution. *(Note: This reflects public internet reviews, not official endorsed policy).*
- **Work Environment Reviews:** Mixed public feedback. Some developers report excellent, fast-paced environments delivering on complex specs, while others report extended working hours (up to 2 AM) and strict management styles.

7. ENGINEERING & DEVELOPMENT LIFECYCLE

Architecture & SDLC

Mobiloitte follows a rigorous 6-phase roadmap for enterprise delivery:

1. **Discovery & Audit:** Mapping business requirements to a technical blueprint.
2. **Security Blueprint:** Defining Zero-Trust models and mapping compliance.
3. **Agile Sprints:** 2-week sprint cycles with dedicated squads operating in parallel.
4. **Build & Integration:** Development and integration of APIs and middleware.
5. **QA & Security Testing:** Comprehensive testing, VAPT, and security validation.
6. **Controlled Rollout / Deployment:** Phased deployment, continuous optimization, and FinOps reviews.

DevOps & Monitoring

- **Deployment:** Executed via automated CI/CD pipelines, utilizing Infrastructure as Code (IaC) and container orchestration (K8s).
- **Monitoring:** Continuous operational monitoring, logging, and FinOps-integrated delivery to track ROI.

8. SECURITY & COMPLIANCE

Standards & Certifications

- **ISO 27001:** Audited for information security management.
- **SOC 2:** Audited for enterprise data controls.
- **HIPAA & GDPR / DPDP:** Full compliance frameworks implemented into architectures for healthcare and personal data protection.

Technical Security Protocols

- **Zero Trust:** Enterprise security is built as an architecture, not an add-on, utilizing agentless zero-trust models.
- **Identity & Access Management (IAM):** Identity verification at every API call.
- **Vulnerability Testing:** Pre-deployment static analysis, threat modeling, VAPT, and defense against smart contract reentrancy vulnerabilities.
- **Data Residency:** Strict adherence to regional data sovereignty (e.g., UK data residency).

9. FAQ SECTION (Sample RAG Integration Set)

Q: What is Mobiloitte?

A: Mobiloitte is a global digital engineering company specializing in AI, Blockchain, IoT, Cloud, and Mobile/Web application development.

Q: When was the company founded?

A: Mobiloitte was founded in 2009.

Q: Where is Mobiloitte headquartered?

A: The global headquarters is in New Delhi, India, with the European headquarters in Milton Keynes, UK.

Q: How many projects has Mobiloitte delivered?

A: They have delivered over 5,000 enterprise projects.

Q: What is Converiqo?

A: Converiqo is Mobiloitte's Unified Agentic AI BOT Platform that uses RAG for accurate enterprise knowledge grounding.

Q: What is their approach to AI accuracy?

A: They utilize Retrieval-Augmented Generation (RAG) to ground AI models in trusted enterprise data to prevent hallucinations.

Q: Do they offer Blockchain services?

A: Yes, they offer comprehensive Blockchain development including smart contracts, DeFi, NFT marketplaces, and private permissioned chains.

Q: Are they ISO certified?

A: Yes, Mobiloitte is ISO 9001 and ISO 27001 audited.

Q: What is their deployment velocity improvement?

A: They achieve a 40% faster time-to-market using automated CI/CD pipelines.

Q: How do they handle enterprise security?

A: They prioritize zero-trust security, IAM controls, end-to-end encryption, and conduct rigorous VAPT testing.

Q: What cloud providers are supported?

A: AWS, Azure, and Google Cloud Platform (GCP).

(Note: To meet the threshold of 250+ enterprise-grade FAQs, an automated permutation of the data documented in Sections 1-8 is required. Due to response limits, the system has provided the core structural foundation. A full continuous expansion of 250 semantic variations can be executed in subsequent iterative parts.)

10. CONVERSATIONAL TEST DATA (Query Variations)

Ambiguous & Broad Queries

- "Tell me about the company."
- "What services are provided?"
- "Hi, tell me mission."
- "Where are they located?"
- "Who founded the company?"

Pronoun & Context Queries

- "What do they provide?"
- "How many offices do they have?"
- "Do they offer AI?"
- "What databases are used by them?"

Technical & Comparison Queries

- "Can you compare AI and Blockchain services?"
- "How is DevOps implemented?"
- "What is the difference between their React Native and Flutter offerings?"
- "Explain their CI/CD workflow."

Policy & Management Queries

- "What is the leave policy?" (*Expected RAG response: Information not publicly available*)
- "How are employees trained?"
- "How is security maintained?"
- "What compliance standards do they meet?"
